The AXIS 200+ Web Camera is the world's first self-contained Web server and network camera.

The AXIS 200+ includes everything you need to capture live images and deliver them to any desktop over intranets, the Internet, or mixed network environments.

Just install the camera directly to your Ethernet network, ISDN line, or phone line via a dedicated or wireless modem and you will be ready to view images via a standard Web browser in no time.▲
